### **Table of Contents**

a)Logical Model	2
a)Relational Model	3
a)Assumptions	4 - 5
b)DDL Code for Check Constraints	5 - 6
c)Trigger	7 - 8
d)Count(*) Query Results	8 - 9
e)Data Dictionary	10
f)DDL Code	11 - 30

### a) Assumptions

### 1. Customer

- Each customer maintains only one primary identification, and the value of ID TYPE allows only {Passport, SSN, DriverLicense}.
- It is assumed that a customer maintains only one phone number (PHONE) and one e-mail address (EMAIL).

### 2. Author

- Only authors can participate in Seminars (this is accomplished by recording the INVITATION\_ID in HZS\_SEMINAR\_ACCESS).
- It is assumed that the INVITATION\_ID is different for each Seminar, so it is stored in the bridge table ( HZS\_SEMINAR\_ACCESS ) rather than in the Author table.

### 3. Sponsor

- Each Sponsor can only be either "Individual" or "Organization" and is
  distinguished by SPONSOR\_TYPE in the parent table HZS\_SPONSOR and then
  by the and then use the sub-table to store the different types of information.
- Assume that the same Sponsor can sponsor multiple Seminars; at the same time, a Seminar can also have multiple Sponsors.
- The sponsorship amount (AMOUNT) is stored in the many-to-many intermediate table HZS\_SEMINAR\_SPONSOR.

### 4. **Event** (parent table)

- Only {Seminar, Exhibition} are allowed for EventType.
- By means of class table inheritance, HZS\_SEMINAR and HZS\_EXHIBITION hold subclass proprietary fields (e.g., EXPENSE), respectively.
- If the EventType is Seminar, it must have a corresponding record in HZS\_SEMINAR; if it is Exhibition, it must have a corresponding record in HZS\_EXHIBITION.

### 5. **Topic**

For simplicity, it is assumed that an Event or Book has only one main Topic.

### 6. Book / BookCopy

- Book holds only the general information of the book (name, subject, etc.);
- The BookCopy table is used to distinguish between different physical copies, each with a STATUS.
- When all copies have been borrowed, they are unavailable and the customer has to wait.

### 7. **Rental** (Borrowed Books)

- Each rental corresponds to one HZS\_RENTAL record; a rental contains only "one copy". If the user borrows more than one book at a time, there will be more than one record in RENTAL.
- ACTUAL\_RETURN\_DATE If not filled in, it means it has not been returned; it is used to calculate the invoice after it is returned.
- RENTAL\_STATUS can be {Borrowed, Returned, Late}, etc. Late can also be updated automatically based on date logic.

 The question specifies the cost calculation: 0.2\$/day, overdue 0.4\$/day, and the trigger automatically completes this part of the logic.

### 8. Invoice

- An Invoice is generated for each Rental that is returned. It is assumed that one Rental corresponds to at most one Invoice.
- INVOICE AMOUNT >= 0 is limited by the CHECK constraint.

### 9. Payment

- The same Invoice can be paid multiple times, so HZS\_PAYMENT and HZS\_INVOICE have a 1-to-many relationship.
- METHOD Only {CASH, CREDIT, DEBIT, PAYPAL} is allowed.
- Fields such as CARD\_HOLDER\_NAME can be recorded if paying with a credit/debit card, but can be left empty if paying with cash.

### 10. StudyRoom / RoomReservation

- The topic describes the need to record only one customer (not all group members) and store his/her customer ID in the reservation table.
- GROUP\_SIZE is for reference only, no more detailed information is stored for each member.
- Prevent duplicate bookings for the same time period by START\_TIME & END\_TIME, with conflict checking done by the application layer or database triggers.

# b) CHECK constraints: ALTER TABLE HZS\_CUSTOMER ADD CONSTRAINT CK\_CUSTOMER\_ID\_TYPE CHECK (ID\_TYPE IN ('Passport', 'SSN', 'Driver\_License')); ALTER TABLE HZS\_SPONSOR ADD CONSTRAINT CK\_SPONSOR\_TYPE CHECK (SPONSOR\_TYPE IN ('INDIVIDUAL', 'ORGANIZATION')); ALTER TABLE HZS\_RENTAL ADD CONSTRAINT CK\_RENTAL\_DATES CHECK ( ACTUAL\_RETURN\_DATE IS NULL OR ACTUAL\_RETURN\_DATE >= BORROW\_DATE );
